

Understanding Annuities

Thinking Ahead

There's no mystery to providing for a comfortable retirement—it begins with careful preparation. And the sooner you begin, the better. This is particularly true when one considers realities such as inflation, taxes and potential cuts in Social Security benefits. To deal with these issues, many investors are making annuities a part of their retirement strategy. To develop a better understanding of annuities and how they work, it's necessary to begin with the basics.

What is an Annuity?

An annuity is a contract issued by an insurance company that guarantees a steady stream of payments at some point in the future. Traditionally, annuities safeguard against the risk of an investor outliving his or her assets by providing periodic income payments that can be guaranteed for life. When used judiciously, as long-term investment vehicles that grow tax-deferred, annuities can be a powerful financial product. In taking a closer look at annuities, it is useful to break them into categories, comparing and contrasting the different types.

Immediate vs. Deferred Annuities

An immediate annuity is purchased with a single payment and is designed to generate an immediate stream of income. Payments to the annuitant typically begin within sixty days after the contract has been annuitized (converted into income). A deferred annuity, on the other hand, is characterized by an accumulation period. The contractowner funds a deferred annuity by making periodic premium payments or by making a single, lump-sum payment. The assets accumulate tax-deferred and payments are put off until a later date, at which time the contractowner may select a payout option.

Fixed vs. Variable Annuities

Annuities that offer a guaranteed rate of return for a set period of time are called fixed annuities. This rate is determined and guaranteed by the life insurance company that issues the contract. In a variable annuity, you are offered investment choices through a selection of "subaccounts" whose values will fluctuate over

time. Consequently, the return on a variable annuity is a direct reflection of the investment performance of the subaccounts. The choice of a fixed or variable annuity usually depends on the contractowner's specific needs and goals, as well as risk tolerance.

“...many investors are making annuities a part of their retirement planning strategy.”

Single Payment vs. Flexible Payment Annuities

A single payment annuity is purchased with a single lump-sum payment at the inception of the contract. This means that the funding of this annuity is achieved with one payment. Conversely, flexible payment annuities are purchased with periodic payments, payable on a flexible schedule.

The Benefits of Diversification

Although variable annuities are different from mutual funds, they are similar in that your money is pooled with that of other variable annuity and variable life insurance owners with similar objectives and is invested in professionally managed portfolios. Most variable annuities allow you to choose among portfolios of stocks, bonds and money market instruments. This affords you the advantage of greater diversification. In addition, you may adjust your allocations among the available subaccounts to rebalance for your risk tolerance and circumstances without incurring a current tax liability. In turn, diversification helps minimize your investment risk by reducing the extent to which you are affected by a decline in any one portfolio. Of course, diversification does not protect against overall market trends that generally affect stocks or bonds.

“There's no mystery to enjoying a comfortable retirement—it begins with careful planning. And the sooner you begin, the better.”

The Tax-Deferred Advantage

One of the primary advantages of annuities is that they are tax-deferred, which means that you pay no current income taxes on the gains your annuity earns until you withdraw your money. Due to the power of compounding, the value of a tax-deferred annuity will potentially grow faster than a taxable investment earning the same return. Because the government established the rules for tax deferral in an effort to encourage Americans to save for retirement, withdrawals made before age 59½ may be subject to a 10% federal tax penalty on the amount of earnings withdrawn, in addition to any income taxes due on that amount. The following chart shows the general advantage of tax deferral:

Hypothetical Example—The Power of Tax Deferral

The hypothetical assumes a net investment of \$40,000 and a constant annual growth rate of 8% compounded monthly. It assumes that an effective federal income tax rate of 28% applies. In the case of the taxable investment, it is assumed that taxes are paid on gains as earned each year. In the case of the tax-deferred investment, it is assumed that no taxes are paid until the investment is liquidated at which time the taxes are paid on the entire amount of the gain at an effective rate of 28%. No reference to any specific product is intended. This illustration does not reflect mortality and expense charges, sales charges and other administrative fees typically found with annuities. This example is hypothetical and does not represent an investment in or performance of any First Investors Life annuities.

The Guaranteed Death Benefit

The death benefit guarantees that your beneficiary will never receive less than the amount you contribute to your contract (less any withdrawals you make) even if the balance declines because of market fluctuations. Any assets remaining in your annuity (minus withdrawals and fees) can be passed on directly to your named beneficiaries without the cost and delays of probate.

Talk to a First Investors Financial Services Representative

When you decide the time is right for you to start thinking about your retirement options, be sure to talk to a First Investors Financial Services Representative. He or she can go over your circumstances to help determine if an annuity is right for you. Even if you have established a retirement strategy, an annuity is an excellent method to supplement that strategy, and, you'll want to review it annually with your representative to make sure that it's in keeping with your time horizon and retirement goals.

Financial Services With A Personal Touch

First Investors has been serving the needs of investors since 1930. Through the Great Depression, World War II, numerous recessions and bull and bear markets alike, we have remained committed to our mission—helping our clients reach their financial goals. Today, we offer a wide range of financial products and services, including mutual funds, annuities, and life insurance. We pride ourselves on delivering financial services with a “personal touch.” Your First Investors Financial Services Representative is a licensed professional who will take the time to learn about your current financial situation and future goals in order to assist you with your financial needs.

Neither First Investors nor its representatives offer tax, legal or estate planning services. Clients should contact their personal tax and legal advisers for any advice about tax-related investment decisions, estate planning or gifting.

Life insurance and annuity products are issued by First Investors Life Insurance Company, 110 Wall Street, New York, NY, 10005, and distributed by First Investors Corporation. All guarantees, annuity payments and policy provisions are subject to the financial strength and claims-paying ability of First Investors Life Insurance Company.

For more information about First Investors funds or First Investors Life Insurance Company variable products, you may obtain a free prospectus by contacting your financial services representative, writing to the address below, calling (800) 423-4026, or visiting our website at www.firstinvestors.com.
